Version 0.1.0 2026-10-15

1 Overview

Chalkboard is a Beamer color theme with a dark green background, warm off-white text, and yellow, blue, and pink accents. It is distributed as `beamercolorthemechalkboard.sty`; the user-facing theme name is `chalkboard`. It requires Beamer and no extra fonts or image assets.

2 Installation and use

For a single presentation, copy the style file into the directory containing your main source. On Overleaf, upload it beside the main source. For a local installation shared between projects, use the directory `tex/latex/beamercolorthemechalkboard/` under your personal TeX tree; find that tree with `kpsewhich -var-value=TEXMFHOME`.

Load the main theme first and the color theme afterwards:

```
\documentclass{beamer}
\usetheme{Madrid}
\usecolortheme{chalkboard}
\begin{document}
\begin{frame}{Hello}
  Normal text and \alert{an important detail}.
\end{frame}
\end{document}
```

No package options are defined. See `chalkboard-example.tex` and its PDF for a title page, lists, mathematics, three block types, and the palette. Compile either documentation or example source twice with pdfLaTeX from the package directory.

3 Palette and behavior

Color name	HTML value	Main use
`chalkboard`	`2A3B33`	Background
`chalkboarddark`	`1F2B25`	Titles and palettes
`chalkboardlight`	`34483E`	Block bodies
`chalkwhite`	`E6E4D8`	Normal text
`chalkyellow`	`EBD58A`	Structure and standard titles
`chalkblue`	`9FC5E0`	Example text and titles
`chalkpink`	`F0A6A0`	Alerts and alert titles

The theme sets normal text and background colors, the four palettes, title and frame-title colors, author/date colors in headers and footers, and standard, alert, and example block colors. Projected item labels use dark green on yellow and a bold font.

In addition to colors, the theme selects rounded blocks without shadows and the default rounded title page without shadows. It does not select ball-shaped list markers: these depend on the main or inner theme. To change these choices, apply your template or font settings after loading Chalkboard. For example:

```
\setbeamertemplate{blocks}[default]
\setbeamerfont{item projected}{series=\mdseries}
```

4 Compatibility and customization

Madrid is the reference combination. The default Beamer theme is also supported; other themes can supply templates or later settings that affect the result. The named colors above are available for use in your content. Use Beamer's `\setbeamercolor` after loading the theme to customize individual elements.

Handout mode retains the dark background. There is no light/print mode. Check the result on your presentation equipment: projector brightness and room lighting can affect readability.
